

Community Partnerships

Find Classroom Volunteers

KnowAtom is uniquely positioned to connect schools with organizations that want to increase community involvement and improve science education.

KnowAtom has active volunteer programs in which community members participate in classroom activities, mentor and aid students with troubleshooting experiments or engineering design challenges. Classroom volunteers support teachers in their efforts to deliver high-quality, hands-on instruction and develop critical thinking.

Community partners from a science-related industry have a unique opportunity to connect students with science and engineering careers. All volunteers are fully supported with the background necessary to assist classroom activities and discuss lesson topics. Organizations seeking volunteer opportunities are encouraged to contact KnowAtom for a referral to specific schools seeking classroom volunteers.

School Partners

Schools or districts seeking to improve science, engineering and technology education are encouraged to consider including community volunteers in their classrooms. Volunteers aid in mentoring, materials management, and troubleshooting student experiments and prototypes. Volunteers also bring a wealth of personal experience and knowledge to the classroom.

Corporate Partners

Organizations or individuals seeking to engage classroom science and engineering instruction can make a quick and widespread impact with KnowAtom. Our deployment strategy delivers third party standardized test data as validation of sponsored program success. Those looking to introduce the KnowAtom Science system are guaranteed logistics, curriculum planning, materials, sourcing, prep, pacing, delivery, and scheduling are facilitated to accommodate almost any learning environment.

Contact us to be connected with a school or business in your community.
